High Reliability at a Very Attractive Price

With the new PIANO series, PULS-quality DIN-rail power supplies are now available for even the most cost oriented user. Through a fresh and innovative approach, the intrinsic properties of a PULS power supply (high reliability and long service lifetime) have now been introduced into a product that also has significant price advantages. PIANO prices are 20 to 40% below previous model prices.

Despite our low cost requirements, an MTBF of more than 1.4 million hours and efficiencies of 90.5 to 94.5% have been achieved. This innovation was made possible by a clever single-board design, cost-saving polycarbonate housing and a design team that was focused on an intelligent design for manufacturability.

Availability

200-240V version is currently in stock, global version will be available Q2/2015
The five units of the new PIANO series by PULS offer:

- High reliability with basic functionality
- Long life
- Small width
- Large, rugged screw terminals
- Full performance from -10 °C to +55 °C

- DC-OK relay (except PIC120.242C)
- IEC / UL 60950-1 and UL 508 (in preparation)
- Radio interference EN 55011/022 Class B
- Immunity IEC / EN 61000-6-1 and IEC / EN 61000-6-2
- 3 years warranty
Additional Benefits

To ensure that your application continues to function properly, PIANO includes a DC-OK signal, an operational temperature range of up to +55°C (without derating) and large input and output terminals all within a light and compact housing. The 24V/10A unit, with a width of only 49mm, is the same size as the smallest “new to market” high-end products from other vendors. Additionally, for applications that do not necessarily need a mains voltage of 100-120V, the user can further reduce their costs by choosing one of the PIANO versions that is specifically developed for 200-240V.

Standards and Approvals

- IEC / UL 60950-1
- UL 508 in preparation
- EMC Emission EN 550551/022 Class B
- EMC IEC / EN 61000-6-1 / 61000-6-2 / 61000-6-4
- Degree of pollution IEC 62103: 2
- Mechanical Shock IEC 60068-2-27: 30g 6ms, 11ms 20g
- Vibration IEC 60068-2-6: 2g
Efficiency at 230V, 25°C and Full Load

Best-in-Class Efficiency
The efficiencies of the PIANO series are between 90.5 and 94.5% at 230V and thus very high, especially for devices in this price range.

Your Benefit:
All users can appreciate the advantages and savings of the unit’s high efficiency and low heat generation which in turn makes the high reliability, long service lifetime and compact design all possible.
Innovative Housing

High Quality Housing

The stylish housing of the PIANO series is made of a high quality polycarbonate. This material is characterized by its high strength, impact toughness and hardness, which is why this material is most commonly used in sophisticated products like SLR cameras, smartphones and laptops. The design has been extensively and rigorously testing and passed with significant safety margins.

Your Benefit:

The sleek housing promotes a striking first impression and its quick installation and resistant to corrosion upholds this sentiment. The light weight design is especially advantageous against high mechanical shock and vibrational stresses.
Service Lifetime

The Service lifetime of the new PIANO-series is remarkably high when compared to similar products on the market. The outstanding service lifetime was achieved by the highly efficient and sophisticated thermal design of the PIANO but also by choosing to use high end components with long service lifetimes (e.g. electrolytic capacitors).

24V / 5A at +25°C / +40°C: 133,000 / 47,000 hours
24V /10A at +25°C / +40°C: 126,000 / 57,000 hours

Data for the 200-240V version at 100% load

Your Benefit:

These affordable devices can even be used in high-end applications.
High Reliability / MTBF

High Mean Time Between Failure

A high MTBF value expresses the outstanding reliability of the PIANO series. These high reliability figures are attributed to the unit’s low internal temperatures (thermal design) as well as an intelligent design that uses fewer and unstressed components.

MTBF:
24V/ 5A at +25°C/+40°C: 3.2/1.7 Million hours
24V/10A at +25°C/+40°C: 1.6/0.9 Million hours

Data for the 200-240V version at 100% load, calculated by SN29500, IEC 61709

Your Benefit:
Set it and forget it.
Small Size, Light Weight

With a width of only 49mm, the 24V / 10A unit is small but definitely worth noticing. It is the same size as the smallest and “newest to market” high-end products from other vendors. The 120W devices weigh between 350-370g and the 240W units weigh a maximum of 550g.

Compact Design

Your Benefit:

Space on the DIN-rail is always precious and therefore a smaller power supply can provide a solution. The low weight reduces stress on the DIN-rail and makes the device sturdy, even at high shock and vibration levels.
Cost-Effective Single Board Design

Single Board Design

The single board concept in conjunction with the polycarbonate housing leads to easier manufacturing and testing procedures while increasing the process reliability.

Your Benefit:

Lower production costs means that the savings are passed on to the customer.
Comfortable and Easy to Use

Large Screw Terminals

Conductor cross-sections of up to 6 mm² for solid wires and 4 mm² for stranded wires are easily assembled. The large screws promote easy and comfortable wire fixation which can prevent unsafe connections.

Your Benefit:

Fast, easy and safe wiring.
Floating DC-OK Signal Output with Relay

DC-OK Signal Output

All PIANO power supplies have a DC-OK LED. They also have the ability to report the DC-OK signal via a floating relay contact with the exception of a further cost-reduced version. A mechanical relay was used due to its ease of use when compared to a semiconductor relay.

Your Benefit:

Increased system reliability is achieved through a simple monitoring function.
